

East Milford Storm Sewer Project
City of Milford, Ohio
2008

The East Milford Storm Sewer Project will begin on March 3rd and will run through the end of May. The project area includes the following streets: Craig Lane, Dot Avenue, May Street, and Helen Street. The purpose of the project is to alleviate storm water problems in the East Milford area that result from large rain events. The project is being funded with the Storm water utility created in 2004; the total project cost is \$522,000. Once construction is complete the streets will be repaved. The project will be completed in five phases over a 2 ½ month period. Dates for each phase are identified on the respective maps; however, dates are approximate and will depend on weather. The contractor will make every effort to complete the project quickly. If you have any questions or concerns, please call Pam Holbrook at 248-5093.
